Gary Pines Master Plan Update

Castle, E. E., and Stelljes, J. Agricultural and Natural Resources Department, University of Minnesota Crookston

The city of Gary, Minnesota, has invested continual effort in implementing the 2018 Gary Pines Master Plan, which guides the management of 160 acres of naturalized forest and grassland prioritized for public recreation. This design project focused on creating a Master Plan Update for five components of stakeholder interest: trail accessibility and maintenance, invasive plant species, edible plant species, observation area seating, and site parking.
